Water and electricity dual metering controller is an intelligent management device that integrates electricity metering and water flow metering functions, aiming to achieve accurate billing and automated management of water and electricity resources. The device usually integrates electronic electricity meters and water meters, and is linked to the background system through IC cards, radio frequency cards or remote communications (such as RS485, NB-IoT, LoRa, etc.), supporting prepayment, real-time monitoring, power and water cuts due to arrears, automatic meter reading and other functions. The water and electricity dual metering controller not only improves energy transparency and management efficiency, but also has the characteristics of small size, easy installation and high safety, which meets the needs of current smart communities, energy conservation and emission reduction, and refined property management. With the development of smart cities and the Internet of Things, the device is constantly upgrading in the direction of wireless, data-based, and platform-based, becoming an important part of modern intelligent energy management.
