## Abstracts

Water and soil pollution are critical concerns in the mining industry and can be caused by toxic heavy metals, surfactants, fine particles of minerals, oil and grease, soaps and detergents, rubber, poisonous chemicals, high acidic or alkaline chemicals, and coal particles. The industry is looking for a sustainable practice to reduce its environmental impact. Mining chemicals along with water and wastewater treatment equipment play an important role in this by treating water to remove impurities and waste.

### SCOPE OF THE REPORT:

This report focuses on the Water and Wastewater Management for the Mining in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

According to the report, one driver in market is need for sustainable practices in the mining industry. The mining industry is water intensive; it is used for activities such as extraction of minerals, which are present in solids and liquids forms, transport slurry, and protect dust. Thus, water is a vital component for mining companies; however, mining activities create an ecological imbalance due to high water use. Also, the water run-off from the extraction activities is leading to pollution of the ground and surface water. This situation worsens in areas that are facing water scarcity, leading to local communities opposing mining activities.

The worldwide market for Water and Wastewater Management for the Mining is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx

million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
