Abstracts

Water and waste water treatment chemicals (WWTCs) are used to eliminate impurities or suspended substances from contaminated water. These chemicals make the contaminated water fit for industrial or domestic uses. WWTCs are used for purifying municipal drinking water, industrial waste water, and production waste water, making the treated water reusable in different applications. These chemicals are also used for purifying sea water and ground water. The choice of chemicals primarily depends on the cost and the end outcome.

SCOPE OF THE REPORT:

This report focuses on the Water and Wastewater Treatment Chemicals (WWTCs) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

According to the report, one driver in the market is scarcity of water leading to increasing use of WWTCs. The decline in the level of water and water quality because of the threatening water crisis across many countries is promoting WWTCs companies to invest in alternative water treatment methods. As a result, the opportunities for suppliers within the WWTCs market is expected to increase. The government of various emerging countries such as India, China, South Africa, and others has been encouraging the use of industrial wastewater treatment and waste water reuse by imposing penalties on noncompliance and rolling out incentives for the reuse of water.

The worldwide market for Water and Wastewater Treatment Chemicals (WWTCs) is

expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
