Abstracts

One aspect of water quality management is the monitoring and sampling of stormwater runoff, which could contain a higher level of pollutants such as oils, petrochemicals, asbestos, lead, mercury, phosphates and nitrates. As a result, stormwater management plans are becoming common for construction and industrial sites. However it is a concern to any industry where there is a potential issue of runoff or discharge.

SCOPE OF THE REPORT:

This report focuses on the Water Quality Monitoring Equipment in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The growth of this market is driven by stringent government policies, initiatives toward lowering the water pollution level, and growing industrial applications pushing the market for improved water testing and analysis products.
