According to our (Global Info Research) latest study, the global Water-Soluble Silicone Oil market size was valued at US\$ 138 million in 2024 and is forecast to a readjusted size of USD 199 million by 2031 with a CAGR of 6.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Water-soluble silicone oil is an organic silicon compound with a special chemical structure. It is modified on the basis of traditional silicone oil. By introducing hydrophilic groups (such as polyether groups, etc.), it has good solubility or dispersibility in water. Traditional silicone oil is usually insoluble in water, but water-soluble silicone oil breaks this limitation. It not only retains some excellent properties of silicone oil, such as low surface tension, lubricity, high and low temperature resistance, chemical stability, etc., but also can form a uniform system with water. This unique property makes water-soluble silicone oil widely used in many fields, and it can play its special function in the water phase system and improve the performance and use effect of the product.
