The global Water Source Heat Pump Scroll Unit market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The water source heat pump scroll unit is an efficient heating, cooling and hot water system that uses the temperature in natural water bodies for heat exchange. The core component is the scroll unit, which can compress low-temperature and low-pressure refrigerant gas into high-temperature and high-pressure refrigerant gas. gas to achieve energy transfer. This system excels in energy conservation and environmental protection because it extracts heat from natural water sources, reducing reliance on traditional energy sources and helping to reduce carbon emissions. Water source heat pump scroll units are widely used in heating, cooling and hot water systems in residential, commercial and industrial buildings, among other applications.
