According to our (Global Info Research) latest study, the global Water Treatment NanoBubble Solution market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A Water Treatment NanoBubble Solution is a liquid solution that contains bubbles at the nanoscale. Nanobubbles are very small gas vesicles, usually in the range of tens to hundreds of nanometers in diameter. The gas bubbles are highly stable in solution and can persist for long periods of time. They are formed by mixing the gas well with the liquid. Different methods such as ultrasonic treatment, electrolysis, mechanical stirring, etc. can be used in the preparation of nanobubble solutions to achieve a uniform dispersion of the gas with the liquid. They are widely used in water treatment, environmental remediation, drug delivery, food processing, surface cleaning, etc. Nanobubbles can provide high gas-liquid boundary area, enhanced mass transfer and reaction efficiency, and have potential applications.
