## Abstracts

The global Water-Washable Resin-Based Ribbon market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Water-washed resin-based carbon tape is a special insulating material composed of resin-based materials and conductive materials such as carbon fiber. It has good conductive and insulating properties and can be used for insulating and conductive parts of power equipment. The characteristic of water-washable resin-based carbon ribbons is that they can be washed with water to remove surface contaminants and restore their conductive properties. Water-washed resin-based carbon ribbons are commonly used for insulating and conductive parts of power transformers, motors, generators and other equipment. It can be used as insulating gaskets, insulating sleeves, insulating layers, etc. to isolate and protect conductive parts in electrical equipment. The advantages of water-washable resin-based ribbons include high strength, wear resistance, high temperature resistance, chemical corrosion resistance, etc. It has good electrical conductivity and can effectively prevent electrical equipment from leakage, short circuit and other faults. In addition, water-washable resin-based ribbons also have a long service life and good durability, and can operate stably for a long time under harsh environmental conditions.
