Abstracts

According to our (Global Info Research) latest study, the global Waterbased Penetrating Sealer market size was valued at US\$ 705 million in 2025 and is forecast to a readjusted size of US\$ 992 million by 2032 with a CAGR of 4.9% during review period.

Water-based penetrating sealants are environmentally friendly concrete protective materials that use water as a dispersion medium and contain silanes/siloxanes or inorganic nanomaterials. They penetrate deep into the substrate (typically 3?10 mm) through capillary action, reacting with cement hydration products to form a hydrophobic gel. This effectively blocks corrosive media such as moisture, chloride ions, and carbon dioxide, and is widely used to improve the durability of bridges, tunnels, underground engineering, and marine structures. The upstream of the industry chain includes suppliers of functional silane monomers (such as isobutyltriethoxysilane), nano-silica sol, additives (wetting agents, film-forming aids), and water-based resins. The midstream consists of specialized building materials companies with capabilities in formula development, penetration depth control, and engineering application verification. The downstream primarily targets infrastructure construction companies, municipal engineering projects, and real estate developers. Since raw material costs account for approximately 50%?60% and construction relies on specialized support, the overall gross profit margin of the industry is between 35% and 55%. In 2024, the global production of water-based penetrating sealants was approximately 253,704 tons, with an average price of approximately US\$2.7 per kilogram. The industry's gross profit margin typically fluctuates between 35% and 55%. Global production capacity in 2024 was approximately 329,110 tons.
