According to our (Global Info Research) latest study, the global Waterborne Epoxy High-Build Anti-Corrosion Coating market size was valued at US\$ 2212 million in 2025 and is forecast to a readjusted size of US\$ 3034 million by 2032 with a CAGR of 4.7% during review period.

Water-based epoxy thick-film anti-corrosion paint is a type of environmentally friendly epoxy anti-corrosion coating that uses water as the dispersion medium. It features high solids content, high film-forming ability, and excellent anti-corrosion performance. This coating forms a stable slurry by dispersing epoxy resin, curing agent, additives, and fillers in water, which can form a thick film coating on metal, concrete, and steel structures, achieving long-lasting corrosion resistance, protection against chemical erosion, wear resistance, and UV resistance.

The upstream of the industry chain mainly includes suppliers of chemical raw materials such as epoxy resin, water-based curing agents, anti-rust pigments (zinc phosphate, mica iron oxide, etc.), titanium dioxide, heavy calcium carbonate, talc, silica powder, dispersants, wetting agents, and defoamers, as well as resin synthesis and chemical equipment manufacturing enterprises. The midstream consists of water-based epoxy thick-film anti-corrosion paint manufacturers, responsible for formula design, resin modification, pigment and filler dispersion, product blending, and performance testing, forming a water-based epoxy thick-film primer, intermediate coat, and supporting heavy-duty anti-corrosion coating system. The downstream is mainly used in bridge steel structures, rail transit, petrochemical storage tanks, oil and gas pipelines, marine engineering, ports and docks, wind turbine towers, power facilities, municipal infrastructure, industrial plants, and sewage treatment facilities.

In 2025, global sales of water-based epoxy thick-film anti-corrosion paint reached 282,900 tons, with a production capacity of approximately 404,000 tons, an average selling price of US\$7.6/kg, and an average gross profit margin of 20%-30%.

Stricter global environmental regulations are a significant external driving force behind the development of the waterborne epoxy thick-film anti-corrosion paint market. Major markets such as Europe, the United States, North America, and China have successively issued stringent VOC emission standards and policies promoting low-solvent coatings, accelerating the replacement process of environmentally friendly waterborne coatings. Simultaneously, engineering projects are increasingly incorporating environmental indicators into their bidding and acceptance scoring systems, accelerating the application and penetration of high-performance waterborne systems. Coating companies are also actively pursuing green certification, low-carbon production, and product lifecycle management to meet market access requirements.
