Waterborne Resin for Inks is a type of polymer material specifically designed for water-based ink formulations. It forms a continuous, durable film during the ink drying process, providing excellent adhesion, gloss, abrasion resistance, and water resistance. Compared to traditional solvent-based resins, these resins use water as the dispersion medium, offering low volatile organic compound (VOC) emissions, environmental friendliness, and reduced odor. They are widely used in printing applications for packaging, labels, paper, and plastic substrates. Common types include waterborne acrylic resins, polyurethane dispersions, and hybrid resins.
