## Abstracts

The global Waterjet Chillers market size is expected to reach \$ 763 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032). In 2025, the global waterjet chiller market posts an annual production volume of approximately 68,000 units against a global installed production capacity of about 82,000 units per year, with average unit price USD 7,600, while the industry sustains an average gross margin of around 33%. Waterjet chillers are industrial cooling systems specifically designed to remove heat from high-pressure water used in waterjet cutting machines, ensuring stable water temperature to maintain cutting accuracy, pump efficiency, seal life, and nozzle performance during continuous operation. In the supply chain, upstream activities include the production of core components such as compressors, heat exchangers, pumps, refrigerants, electronic controls, and stainless-steel or corrosion-resistant piping; midstream manufacturers integrate these components into complete air-cooled or water-cooled chiller units tailored for intensifier or direct-drive waterjet systems, often with precise temperature control, filtration, and vibration-resistant designs; downstream, waterjet chiller systems are supplied through OEM partnerships with waterjet cutting machine manufacturers, industrial equipment distributors, and system integrators, ultimately serving end users in metal fabrication, aerospace, automotive, stone and glass processing, and precision manufacturing facilities.
