## Abstracts

The global Waterproof Board Laying Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Waterproof board laying machine is a special construction equipment used for laying waterproof materials, such as asphalt roofing, PVC membrane, TPO membrane and other plane waterproof materials. The machine is usually composed of a mobile platform with large rollers, which is used to spread and lay waterproof materials on the surface to be covered. The machine can be powered by a gasoline or diesel engine, or it can be electric, and can be operated by one or two workers. The machine is designed to improve efficiency and productivity by eliminating manual labor when installing large waterproof materials. This machine is especially suitable for large projects where speed and efficiency are crucial, because it can significantly reduce the time and manpower required to install waterproof materials.
