Waterproof foil strain gauge is a resistive strain sensor based on metal foil (such as constantan, nickel-chromium alloy), which can measure strain in humid, underwater or harsh environments through special waterproof packaging (such as silicone, polyurethane coating or sealed housing). Its core principle is that strain causes the resistance of the foil grid to change, and the signal is output through the Wheatstone bridge. It is widely used in structural health monitoring of ships, underwater pipelines, marine engineering and industrial equipment. The waterproof level is usually IP68 or higher, and it can withstand long-term immersion or high-pressure environment.
