The global Watertight Door Alarm System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Watertight door alarm system is a safety system installed in ships or other maritime structures to monitor and provide alerts in the event of a watertight door being left open or not properly closed. The system consists of sensors mounted on watertight doors throughout the vessel, which detect the status of the doors. If a door is not properly closed or is left open, the system activates an audible and/or visual alarm to alert the crew and prompt them to take appropriate action to prevent water ingress and maintain the vessel's watertight integrity. This system is essential for ensuring the safety and structural integrity of the ship during operations.
