The global Waveguide Fiber Polarizer market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The waveguide fiber polarizer is an optical device that utilizes the structure and material properties of the optical waveguide to control the polarization of light. It can convert any input polarized light into the required polarized light output, or decompose the input polarized light into two orthogonal polarized light outputs. There are many types of waveguide fiber polarizers, such as polarization beam splitters based on photonic crystals, silicon ridge nanowires, micro-nano fibers, etc. Waveguide fiber polarizers have the advantages of small size, low loss, wide bandwidth, and easy integration. They are widely used in optical communications, optical sensing, optical computing, optical imaging and other fields.
