A wavemeter (or wavelength meter) is a kind of interferometer which is used for precise wavelength measurements for light which is delivered in the form of a laser beam. A wavemeter is characterized by its high sensitivity due to its narrow measurement range. It's used to determine the distance between successive wavefronts of equal phase along an electromagnetic wave. This report mainly focuses on Michelson interferometer-based wavemeter and Fizeau interferometer-based wavemeter.

Global Wavemeter key players include Keysight Technologies, Inc., Bristol Instruments, Inc., Yokogawa Electric Corporation, HighFinesse GmbH, Semight Instruments Co. Ltd. Among them, Keysight Technologies occupies the largest market share, accounting for about 34%. The places of origin are mainly located in North America, Asia Pacific, and Europe, with North America being the largest place of origin, occupying about 75% of the market share, followed by Asia Pacific. In terms of its product type, the product can be divided into Michelson interferometer technology and Feso interferometer technology, with Michelson interferometer technology occupying a dominant position with a share of about 85%. In terms of its applications, it can be divided into manufacturing and scientific research, with manufacturing applications occupying about 67% of the market share.
