Waxy Maize Starch (WMS) is a high molecular weight carbohydrate derived from corn. It has a unique molecular structure that makes it highly soluble and easily digestible. WMS is characterized by its high amylopectin content, which provides a rapid and sustained release of energy. It is commonly used in the sports nutrition industry as a source of complex carbohydrates to enhance performance, improve recovery, and support glycogen replenishment. WMS is also versatile and can be incorporated into various food and beverage products to improve texture and stability.

The industry trend of Waxy Maize Starch (WMS) is experiencing growth and increased popularity. This is primarily due to the growing interest in sports nutrition and the demand for effective and efficient energy sources among athletes and fitness enthusiasts. WMS offers a unique advantage over other carbohydrate sources as its high molecular weight allows for rapid absorption and utilization in the body, making it an ideal choice for pre/post-workout supplements and energy drinks. Additionally, WMS has found applications in the food industry, where its ability to enhance texture and stability in various products is highly valued.
