High demand is boosting the growth of the global market. However, upstream raw material supply and price fluctuations are factors hindering market growth. Furthermore, technological advancements are expected to provide growth opportunities during the forecast period.

High manganese steel generally refers to alloy steel with a Mn content of more than 10%. After years of development, its chemical composition has become stable. High manganese steel is a representative product among iron-based wear-resistant materials and occupies an important position in the wear-resistant industry. It exhibits extremely excellent wear resistance in high-stress, high-impact load working environments and also has excellent toughness. It is not only safe and reliable, but also can be used for a long time. Therefore, wear-resistant high manganese steel is widely used in quarrying, mining, crushing, excavation, railway and other industries.
