## Abstracts

The global Wear-resistant Parts market size is expected to reach \$ 3375 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Wear-resistant parts refer to key industrial components used under high friction, high impact, or strong abrasion conditions to extend the service life of equipment. They mainly include wear-resistant liners, wear-resistant bushings, wear-resistant teeth, wear-resistant rings, and wear-resistant pipe fittings, and are widely used in mining, metallurgy, cement, power, construction machinery, and port equipment. Their upstream raw materials mainly include high manganese steel, alloy steel, ferrochrome, tungsten carbide, and ceramic composite materials; the midstream consists of wear-resistant material casting, forging, and machining companies; and the downstream mainly supplies mining companies, cement plants, steel plants, power plants, and construction machinery manufacturers. With the increasing intensity of resource extraction, the trend towards larger equipment, and the growing demand for continuous industrial operation, the demand for long-life, high-performance composite wear-resistant parts continues to grow, presenting significant business opportunities in material upgrades, domestic substitution, and customized solutions.

This report studies the global Wear-resistant Parts demand, key companies, and key regions.
