The global Wear-Resistant PPS market size is expected to reach \$ 1280 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

Wear-Resistant PPS is a thermoplastic polymer designed to exhibit exceptional resistance to wear and abrasion, ensuring long-term durability and reduced maintenance requirements in a variety of industrial applications. The material's high modulus of elasticity and tensile strength contribute to its robustness, while its chemical inertness and thermal stability guarantee performance in challenging environments. In 2025, global Wear-Resistant PPS production reached approximately 91.7 kilotons with an average global market price of around US\$8000 per ton.

The Wear-Resistant PPS industry is experiencing sustained growth driven by increasing demand in sectors such as automotive, electronics, and mechanical manufacturing. With a focus on technological innovation, companies are developing new types of Wear-Resistant PPS materials that enhance their wear resistance, thermal stability, and chemical inertness. To maintain competitiveness, enterprises are optimizing production processes, reducing costs, and enhancing efficiency. The growing emphasis on sustainability prompts companies to consider the recyclability and environmental impact of materials. Moreover, the provision of customized solutions and the expansion into global markets offer new growth opportunities. Faced with the challenges of environmental regulations and intensifying competition, companies must innovate continuously to achieve sustained revenue and profit growth.
