## Abstracts

According to our (Global Info Research) latest study, the global Wear-resistant Varnish market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Wear-resistant varnish is a type of coating used to protect the surface of wood, which can improve the durability and abrasion resistance of the wood surface and prevent it from being affected by factors such as scratches, collisions, and pollution. China is a world leader in the production of wear-resistant varnish, with many well-known brands. Currently, there are two types of wear-resistant varnish products on the market: solvent-based and water-based. Among them, solvent-based wear-resistant varnish commonly uses polyurethane epoxy resin as the substrate, which has the characteristics of high hardness, good gloss, and strong weather resistance. It can be used for protection and decoration of surfaces such as wood, stone, and metal. Water-based wear-resistant varnish mainly uses acrylic ester emulsion, polyurethane emulsion, and other water-based resins as the base material, which has the advantages of non-toxicity, odorlessness, and environmental health, and is suitable for high-end indoor home decoration, office spaces, and other occasions.
