According to our (Global Info Research) latest study, the global Wearable Blast Sensor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The wearable blast sensor is a wearable, rechargeable blast dosimeter that records, measures, and time/date stamps blast events and cumulative blast exposure. The low-profile device is sensitive enough to catch low-level overpressure events and robust enough to catch severe blasts that cause acute injuries. All event data is stored in a database to track acute and cumulative low-level blast and shock exposure.
