## Abstracts

The global Wearable Blast Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The wearable blast sensor is a wearable, rechargeable blast dosimeter that records, measures, and time/date stamps blast events and cumulative blast exposure. The low-profile device is sensitive enough to catch low-level overpressure events and robust enough to catch severe blasts that cause acute injuries. All event data is stored in a database to track acute and cumulative low-level blast and shock exposure.

This report studies the global Wearable Blast Sensor production, demand, key manufacturers, and key regions.
