Abstracts

The global Web App Automated Testing Tool market size is expected to reach \$ 21892 million by 2032, rising at a market growth of 14.6% CAGR during the forecast period (2026-2032).

A Web App Automated Testing Tool is specialized software that automatically simulates human browser operations on web applications (PC websites, responsive web pages, SPA single-page applications, web management backends, H5 mobile web pages) to execute predefined test scripts without continuous manual operation by testers.

It replaces repetitive manual clicks, form input, page jump, data submission and verification work, automatically capturing page rendering anomalies, functional failures, interface exceptions, compatibility defects and performance bottlenecks. It supports full test lifecycle: script recording/authoring, batch scheduled execution, automatic screenshot logging, defect report generation and test result analysis.
