According to our (Global Info Research) latest study, the global Web Application Security Scanner market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The trend in web application security scanners is towards more advanced and sophisticated tools that can detect a wider range of vulnerabilities and provide more accurate results. Web application security scanners are increasingly incorporating machine learning and artificial intelligence techniques to improve their ability to detect vulnerabilities. These techniques can help scanners learn from past scans and adapt to new attack vectors. With the increasing popularity of APIs, web application security scanners are now focusing on detecting vulnerabilities specific to API endpoints. This includes identifying insecure API configurations, inadequate authentication and authorization mechanisms, and potential data leakage through APIs. Many web application security scanners now offer cloud-based scanning capabilities, allowing users to scan their applications from anywhere and at any time. This eliminates the need for users to set up and maintain their own scanning infrastructure.
