Abstracts

According to our (Global Info Research) latest study, the global Web Design Software market size was valued at US\$ 746 million in 2025 and is forecast to a readjusted size of US\$ 1122 million by 2032 with a CAGR of 6.2% during review period.

Web design software is a tool used to create and design web pages. These software typically offer a variety of design and editing features that enable users to easily design web pages that are attractive, functional, and user-friendly. Web design software usually has a visual interface that allows users to drag and place elements, edit text, images and styles, and set layout and interactive effects.

The current web design software market exhibits a trend of diversification and efficiency: the boundaries between professional design and front-end development are becoming increasingly blurred; design tools are expanding from simple visual layout to include prototyping, collaboration, and code generation, with cloud/local hybrid deployment, collaboration permissions, and version control becoming key requirements; no-code/low-code tools are rapidly emerging, lowering the entry barrier for non-technical personnel while providing developers with more efficient workflows and reusable component libraries; AI-assisted design is gradually being implemented, automatically generating layouts, optimizing images, and ensuring style consistency, but manual control is still needed for creative and brand consistency. Overall, the market is highly competitive, with companies often employing a multi-tool 'selection and integration' strategy to improve design efficiency, achieve cross-platform consistency, and accelerate deployment.
