## Abstracts

According to our (Global Info Research) latest study, the global Web Guiding market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Web-guiding systems are used in the converting industry to position flat materials, known as webs, before processing. They are typically positioned just before a critical stage on a converting machine. Each type of web guiding system uses a sensor to monitor the web position for lateral tracking, and each has an actuator to shift the running web mechanically back on course whenever the sensor detects movement away from the set path. Actuators may be pneumatic or hydraulic cylinders, or some kind of electromechanical device. Because the web may be fragile — particularly at its edge — non-contact sensors are used. These sensors may be pneumatic, photoelectric, ultrasonic, or infrared. The system's controls must put the output signals from the sensors in to a form that can drive the actuator. In this report, one unit represents a web guiding system, including guide mechanism, controller, sensor, Actuator, etc.

In North America market, the core manufacturers of web guiding includes Maxcess International, Nexen Group etc and the top 2 companies hold a share about 40%.
