The web guiding system controller is the core control unit of the web guiding system. It is responsible for receiving the detection signals of sensors (such as laser, photoelectric or ultrasonic sensors), analyzing the material position deviation through algorithms, and outputting instructions to drive the actuator (such as hydraulic cylinder, servo motor or pneumatic device) for dynamic adjustment to ensure the precise positioning of the material on the production line. The web guiding system controller has the characteristics of high-precision algorithm, modular design and anti-interference ability. It is widely used in packaging printing, film processing, lithium battery coating, textile winding, automotive sheet stamping, logistics sorting system and other fields.
