Abstracts

According to our latest research, the global Wedge PVB Interlayer market size will reach USD 24 million in 2031, growing at a CAGR of 8.2% over the analysis period.

A Wedge PVB (Polyvinyl Butyral) Interlayer is a specialized film used in laminated glass to enhance optical clarity and reduce glare, particularly in automotive application. Unlike standard PVB, the wedge-shaped interlayer is thicker at one end and thinner at the other, allowing it to compensate for light distortion and improve visibility, especially in heads-up display (HUD) systems in vehicles. This unique gradient thickness helps reduce double images and enhances the projection quality, making it ideal for advanced windshields and glass applications where precise optical performance is crucial.
