## Abstracts

The global Weeding Film market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Weeding film is a covering material mainly used to inhibit the growth of weeds, keep the soil moist, and promote plant growth. This film usually covers the surface of the soil, forming a barrier that prevents weeds from growing out of the soil. Weeding film are typically made from synthetic polymers (plastics) that are somewhat permeable or designed to be microporous to ensure that the soil still gets the right amount of moisture and oxygen.

This report studies the global Weeding Film production, demand, key manufacturers, and key regions.
