Abstracts

The global Weight Loss market size is expected to reach \$ 66448 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

The business of the weight loss industry refers to a series of systematic weight loss management services provided by professional slimming centers, fitness clubs, medical weight loss clinics or digital health platforms, covering body composition testing, customized diet plan design, exercise prescription guidance, behavioral and psychological intervention, as well as new GLP-1 accompanying clinical weight loss guidance. The upstream supply chain of this service mainly includes suppliers of body measurement instruments and medical testing equipment, professional nutritionists and fitness coach training and certification institutions, customized dietary raw material distributors, and developers of digital management software and AI scheduling systems; the middle part consists of various chain slimming centers, medical beauty weight loss institutions, comprehensive fitness clubs, and online weight loss App operators; the downstream directly serves end consumers with health adjustment, body shape shaping or disease intervention needs, enterprise employee welfare programs and commercial health insurance insured populations.

The core trends of the weight loss industry in the future will evolve comprehensively towards AI-driven ultra-personalized weight loss coaches, integrated online and offline remote accompanying services, as well as a combined solution of 'weight loss drugs + behavioral intervention services'. The core trends of the weight loss industry in the future will evolve comprehensively towards AI-driven ultra-personalized weight loss coaches, integrated online and offline remote accompanying services, as well as a combined solution of 'weight loss drugs + behavioral intervention services'. The service form is transforming from the traditional, extensive and rigid dehydration liposuction to a health

adjustment based on metabolic profile genetic testing. The service form is transforming from the traditional, extensive and rigid dehydration liposuction to a health adjustment based on metabolic profile genetic testing. Future weight loss services will no longer be simple dogmatic dieting, but will dynamically adjust the service radius through real-time monitoring of blood sugar and exercise data using wearable devices. Future weight loss services will no longer be simple dogmatic dieting, but will dynamically adjust the service radius through real-time monitoring of blood sugar and exercise data using wearable devices. The main driving factors for the growth of this service market mainly come from two aspects: First, the acceleration of global urbanization has led to a continuous increase in obesity rates and the incidence of chronic diseases, and consumers' health awareness has shifted from 'treatment after illness' to 'active weight loss prevention'; Second, the popularization of corporate health welfare plans, more and more large multinational enterprises have included employee weight management services in their purchase lists, and the expansion of the coverage of obesity commercial medical insurance claims has brought a large number of high-loyalty B-end paying customers to weight loss service providers.
