The global Weight Pocket market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A weight pocket is a type of weight balancer that consists of a pocket that holds weights such as lead shot, plates, or bars. It is commonly used in diving equipment like buoyancy compensators and diving belts to achieve neutral buoyancy. The weight pocket is designed to hold the weights securely and prevent them from shifting during use. Some weight pockets can be easily removed or added to adjust weight, while others are sewn or fixed in place. Weight pockets can be made of various materials like nylon, neoprene, or Cordura and come in different sizes and capacities to meet different diving and weight requirements.
