Abstracts

The global Welded Helical Solid Finned Tubes market size is expected to reach \$ 724 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

In 2025, global Welded Helical Finned Tubes production reached approximately 250 K Tons, with an average global market price of around 1979 USD per Ton.

Welded Helical Solid Finned Tube is an enhanced heat-transfer tube in which a continuous, uncut metal fin strip is helically wound around the outer surface of a base tube and welded to the tube surface. The welded fin increases the external heat-transfer area and improves heat exchange efficiency between the fluid inside the tube and air, flue gas, or another external medium.

The core value of Welded Helical Finned Tubes lies in significantly increasing heat exchange surface area and transfer efficiency?without substantially increasing equipment volume?by attaching high-efficiency heat exchange fins to the exterior of a base tube. This addresses long-standing pain points in industrial heat exchange equipment, such as insufficient efficiency, spatial constraints, high energy consumption, and underutilized waste heat. Compared to standard bare tubes, Welded Helical Finned Tubes facilitate more efficient heat exchange across various media?including air, flue gas, oil and gas, and steam?making them particularly well-suited for applications such as boiler economizers, air coolers, waste heat recovery systems, condensers, evaporators, and petrochemical heat exchangers. As industrial enterprises increasingly demand greater energy efficiency, equipment compactness, operational reliability, and optimized total lifecycle costs, Welded Helical Finned Tubes have evolved beyond being mere basic components within traditional heat exchangers; they are now recognized as

critical functional materials and key heat exchange units essential for enhancing system energy efficiency, minimizing energy loss, and optimizing thermal management capabilities.

The upstream raw materials for Welded Helical Finned Tubes primarily consist of steel tubes?made from materials such as carbon steel, stainless steel, and alloy steel?as well as fin materials such as aluminum strips, steel strips, and copper strips. Typical suppliers include Nippon Steel, JFE Steel, Alleima, Tubacex, Wieland, Mueller Industries, and Baowu Steel, among others. Downstream applications are primarily found in the power generation, oil and gas, food and beverage, chemical and pharmaceutical, and industrial equipment sectors; typical end-users include Shell, ExxonMobil, Chevron, BASF, Dow, and Evonik.

The production capacity of a single Welded Helical Finned Tube manufacturing line varies significantly depending on factors such as the processing characteristics of raw materials, product specifications, and production processes. Typically, the annual capacity of a single line ranges from several thousand to tens of thousands of tons, while the industry's gross profit margin generally falls within the 15% to 25% range.
