According to our (Global Info Research) latest study, the global Welding and Brazing Consumables market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Welding and brazing is the process of joining metals and thermoplastics by means of coalescence. It is an economical and effective process for creating strong joints between two or more parts. Filler metals melt during welding to create a strong joint. Flux is commonly used to produce a shield of gas around the weld pool to prevent oxidation of the hot metals. Flux typically acts as a deoxidizer preventing the formation of porosity in the weld pool. Flux and filler metals together are known as welding consumables.
