Welding robot is a kind of industrial robot used in welding processes, where two materials are fused together through heating, intermixing, and then cooling the materials to form a strong join. Welding robot is automated and it can help increasing efficiencies & consistencies. Welding robot is widely used in automotive industry, equipment, machinery industry, and ship industry, etc.

Scope of the Report:

This report focuses on the Welding Robot in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In the last five years, welding robot industry has got a rapid development. The production of welding robot is increasing faster every day. During this time, China has been the largest market of welding robot, superseded Japan.

In another hand, the low robot density in China indicated the huge potential market of welding robot. Now, some companies like KUKA, ABB, Panasonic and Yaskawa have built plants in China to produce welding robots. They are trying to grab the market before the domestic manufacturers getting into an investment.

In China, the biggest manufacturing is Siasun in Shenyang, but their production is relatively little compared with these foreign producers. So welding robots consumers in China have to import products from foreign manufacturers.

The worldwide market for Welding Robot is expected to grow at a CAGR of roughly 9.1% over the next five years, will reach 10900 million US\$ in 2023, from 7080 million US\$ in 2017, according to a new GIR (Global Info Research) study.
