Abstracts

Robotic welding is the use of mechanized programmable tools (robots), which completely automate a welding process by both performing the weld and handling the part. Processes such as gas metal arc welding, while often automated, are not necessarily equivalent to robot welding, since a human operator sometimes prepares the materials to be welded. Robot welding is commonly used for resistance spot welding and arc welding in high production applications, such as the automotive industry.

According to our (Global Info Research) latest study, the global Welding Robotics market size was valued at USD 9147.5 million in 2022 and is forecast to a readjusted size of USD 19230 million by 2029 with a CAGR of 11.2% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Global key players of welding robotics include Fanuc, ABB, etc. Global top 5 companies hold a share about 40%.
