Abstracts

The global Western Blot Transfer Membrane market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Western blotting, also known as immunoblotting, separates different components through electrophoresis technology, then uses blotting technology to transfer ('print') the protein to a specific membrane, and then uses the specific binding principle of antigen-antibody, using antibodies as probes to detect target proteins in complex samples. This technology can also be used to detect protein expression levels at different stages and protein interactions.

This report studies the global Western Blot Transfer Membrane production, demand, key manufacturers, and key regions.
