According to our (Global Info Research) latest study, the global Western Blotting Processors market size was valued at USD 158.5 million in 2023 and is forecast to a readjusted size of USD 231.3 million by 2030 with a CAGR of 5.6% during review period.

Western blotting with the help of western blotting processors is an analytical technique used to separate and detect specific proteins from a complex protein sample. Proteins are separated by Western blotting processors based on molecular weight of proteins, which form bands on a gel and are then transferred onto a nitrocellulose or polyvinylidene fluoride membrane. The steps performed by western blotting processors are tissue preparation to antibody-based detection of proteins.
