Wet chemistry, also called bench chemistry or wet chemical analysis, is a form of analytical chemistry that uses methods, such as colorimetry, gravimetry and titration to analyze elements and compounds in liquid samples. Although analytical chemistry has evolved exponentially in last three decades, wet chemical analysis remains is an integral part of the modern analytical chemistry lab. Wet chemical methods are both proven and less expensive. Additionally, modern instrumentation cannot always get the results that specific wet chemical tests provide. Wet chemistry instruments include, pH/conductivity/ion meter, automated titrator, colorimeter, turbidity meter, spectrophotometer and flow injection analyzers (FIAs), segmented flow analyzers (SFAs) or continuous flow analyzers (CFAs).
