Diamond saw blade is a cutting tool that is widely used in the processing of stone, ceramics and other hard, brittle or abrasive materials. Diamond blades are made up of two components: the steel core and the segment (diamond crystals and a bonding system). The core is typically a round flat metal disc used to support the outer segments. The diamond can be attached to the core using vacuum brazing, sintering, or laser welding. If doing a lot of cutting or you're working in a confined space, wet tile saw blades are the way to go. The water ensures your blades keep their cool, which helps them last longer.
