Wet grinding corn refers to the process of converting corn kernels into various products through a wet milling technique. In this process, the corn kernels are soaked in water and then mechanically ground to separate various components like starch, fiber, protein, and oil. Wet grinding corn is commonly used to produce several valuable products such as corn starch, corn syrup, corn oil, and corn gluten meal. These products have versatile applications in the food, beverage, pharmaceutical, and animal feed industries, contributing to a wide range of food and non-food products derived from corn.

The industry trend of wet grinding corn is influenced by several factors. Firstly, there is a growing demand for corn-based products and ingredients across various industries. The versatility of corn-derived products, such as corn starch and corn oil, makes them valuable in food processing and manufacturing. Additionally, the increasing awareness of clean label and plant-based ingredients has led to a surge in the demand for corn-based substitutes and alternatives, further driving the trend of wet grinding corn. Moreover, the utilization of corn by-products, like corn gluten meal for animal feed, contributes to the sustainability and market attractiveness of the wet grinding corn industry.
