Abstracts

Wet separation of solids can involve a large set of sub-processes and techniques. Scrubbers, vibrating screens, screws, jigs, hydrocyclones, spirals, floatation cells, attrition cells, polymer stations, clarifiers and filtering presses are all building stones for a wet solids separation plant process. A common dry separation process is the recycling of heavy metals, such as copper. Separating bulk solids via air classification, screening or gravity separation is ubiquitous in many industries — an understanding of these processes.
