The global Wet Rubbing Fastness Improver market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Wet rubbing fastness improver is a chemical used to improve the rubbing fastness of fabrics under wet conditions. During the production of fabrics, it is common for fabrics to have insufficient rubbing fastness under wet conditions. Wet rubbing fastness improver can be used to improve the rubbing fastness of fabrics.

The main component of wet rubbing fastness improver is polymer, which can form a thin film on the surface of the fabric, improving the rubbing fastness of the fabric. In addition, wet rubbing fastness improver can also improve the feel and luster of the fabric.
