According to our (Global Info Research) latest study, the global Wet Solid State Battery Coating Machine market size was valued at US\$ 292 million in 2024 and is forecast to a readjusted size of USD 1061 million by 2031 with a CAGR of 23.1% during review period.

The wet solid-state battery coating machine is a coating equipment specially designed for wet processes. It is used to evenly coat the slurry containing solid electrolyte on the substrate, and then remove the solvent through drying to form a solid composite electrode. The core challenge is to maintain the close combination of the solid electrolyte and the electrode material after the solvent evaporates, while avoiding interface defects. The wet process is compatible with the transformation of existing liquid battery production lines, but due to the high viscosity of solid materials and solvent residue problems, it has higher requirements for coating uniformity, drying efficiency and equipment corrosion resistance.
