The wet wipes lid applicator is an automated device specifically used to cap wet wipes on packages. The working principle of the wet wipes lid applicator machine is mainly based on mechanical automation and control systems. Specifically, it first automatically arranges the wet wipes in a row through a mechanical device, and then sends them to the capping area through a conveyor belt or other devices. In the capping area, the machine automatically detects the position of the package and accurately caps the wet wipes on the package. Finally, the capped wet wipes will continue to pass through the conveyor belt for subsequent packaging sealing and barcode printing.
