## Abstracts

The global Wheat Protein market size is expected to reach \$ 4306 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Wheat protein is a natural plant protein extracted from wheat flour, with gluten as its main component. Due to its unique viscoelasticity, water absorption, and film-forming properties, it imparts a fibrous texture and skeletal structure to vegetarian and baked goods, essentially solving the key technical challenge of lacking cohesiveness, elasticity, and chewiness in the processing of plant-based foods. It is the core ingredient for creating their 'meat-like' texture. The upstream sector is mainly commodity agriculture, relying on the global wheat planting and processing system, with wheat protein as a byproduct of starch production in large flour mills. The downstream sector is highly concentrated in the food processing industry, including plant-based meat manufacturers (used in chicken nuggets, hamburgers, etc.), baking and pastry companies (to enhance dough gluten), and the pet food and feed industries (as a protein supplement). In 2025, wheat protein production is estimated at approximately 1.5 million tons, with an average price of approximately US\$2,000 per ton, a gross profit margin of approximately 20%, and a single-line capacity of approximately 17,000 tons per year.

This report studies the global Wheat Protein production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Wheat Protein and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Wheat Protein that contribute to its
