Abstracts

According to our (Global Info Research) latest study, the global Wheat Protein market size was valued at US\$ 3087 million in 2025 and is forecast to a readjusted size of US\$ 4306 million by 2032 with a CAGR of 4.9% during review period.

Wheat protein is a natural plant protein extracted from wheat flour, with gluten as its main component. Due to its unique viscoelasticity, water absorption, and film-forming properties, it imparts a fibrous texture and skeletal structure to vegetarian and baked goods, essentially solving the key technical challenge of lacking cohesiveness, elasticity, and chewiness in the processing of plant-based foods. It is the core ingredient for creating their 'meat-like' texture. The upstream sector is mainly commodity agriculture, relying on the global wheat planting and processing system, with wheat protein as a byproduct of starch production in large flour mills. The downstream sector is highly concentrated in the food processing industry, including plant-based meat manufacturers (used in chicken nuggets, hamburgers, etc.), baking and pastry companies (to enhance dough gluten), and the pet food and feed industries (as a protein supplement). In 2025, wheat protein production is estimated at approximately 1.5 million tons, with an average price of approximately US\$2,000 per ton, a gross profit margin of approximately 20%, and a single-line capacity of approximately 17,000 tons per year.
