According to our (Global Info Research) latest study, the global Wheel-mounted Mobile Screeners market size was valued at USD 275.8 million in 2023 and is forecast to a readjusted size of USD 314.9 million by 2030 with a CAGR of 1.9% during review period.

Wheel-mounted mobile screeners are mobile screening plants designed with wheels for easy transportation and maneuverability.

These screeners are used to separate and classify different sizes of materials, such as aggregates, soil, and recyclable materials, in industries including construction, mining, and recycling. The main advantage of wheel-mounted mobile screeners is their mobility and versatility. They are mounted on wheels, which makes them easy to move and navigate through different terrains, whether they are outdoor or indoor job sites. This mobility allows for quick deployment to various work locations without the need for additional equipment, such as cranes or trucks, reducing transportation costs and time. Typically, wheel-mounted mobile screeners consist of a vibrating screen deck, a conveyor system, and a control panel. The vibrating screen deck contains multiple layers or decks of screens with different sizes of openings, allowing for efficient sorting and separation of materials. The conveyor system transports the screened material to the desired location or further processing.
