The global Wheel-rail Beam Lifting Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The wheel-rail beam crane is a lifting equipment used for the maintenance and repair of railway tracks in the railway industry. It is also called railway beam elevator or railway beam elevator. The machine is composed of a wheeled trolley, which can move along the railway track and use the hydraulic system to lift the heavy railway beam or sleeper. The lifting capacity of the machine varies according to the model and manufacturer, but it can usually lift and move beams weighing several tons. Wheel-rail beam crane is used to replace or repair damaged or worn railway beams and install new beams during the construction of new railway lines. The machine can be operated by one person, which can significantly improve the efficiency and safety of railway maintenance and repair operations.
